INTRODUCTION

In a recent essay on what he identifies as “customary deviations” from the dictates of the Internal Revenue Code, Professor Larry Zelenak asserts that the Internal Revenue Service has regularly created administrative deviations from the Code that produce taxpayer-favorable results which cannot be challenged in the courts because taxpayers lack standing to bring such challenges.1 He worries that “the lack of any judicial check on unauthorized giveaways by tax administrators threatens rule-of-law values,”2 and he concludes by proposing “legislation aimed at retaining the practical advantages of customary deviations while assuaging rule-of-law concerns.”3 To illustrate the customary deviations that he identifies, Professor Zelenak analyzes the IRS’s announced decision not to take the position that employee-retained frequent flyer miles earned on employer-funded or business travel produce income when used for personal travel by employees, but observes that other examples abound.

As Professor Zelenak notes, we have devoted some effort to exploring the gap between the expansive literal meaning of various statutory and judicial definitions of income and the narrower meaning that emerges from IRS policies and practices.4 And while there is much that the three of us agree about, nevertheless, as Professor Zelenak knew we would, we disagree with his characterization of various IRS positions as deviations, customary or otherwise. Professor Zelenak argues that these “deviations” are lawless “nonenforcement” of the Internal Revenue Code.5 By contrast, as he notes, we consider his examples to be legitimate “interpretations” of the Code.6

We disagree with Professor Zelenak’s characterization of IRS positions finding certain accessions to wealth not to be income as “deviations” because identifying a deviation requires identifying a clear path (or rule) from which the deviation occurs. Professor Zelenak finds that path in what he refers to as “the Code as written.”7 It seems that for him the Code provides clear, written rules, so IRS positions that are inconsistent with those rules are deviations. We offer a different analysis. We posit that what may look like a clear rule can, upon closer inspection, reveal itself to be a standard. Such a closer inspection involves consideration of how the provision has been administered. In the specific case of the definition of income, we asserted in Defining Income that both the IRS and the courts have treated the definition of income as a standard rather than a rule, and that acknowledging the provision to be a standard clarifies its non-linear construction.8 If there is no rule that all accessions are income, there is no need to find

an exception or posit a deviation in order to conclude that a particular accession is not income. In short, where Professor Zelenak sees a deviation that threatens rule-of-law values, we see a non-exceptional, fully lawful interpretation of a standard. We do not claim that all provisions of the Code are standards. Many are rules—but not the definition of income.

We believe that Professor Zelenak’s essay makes an important contribution by clearly identifying a central concern regarding the IRS’s treatment of income: respect for the rule of law. Professor Zelenak’s concern is that

[t]o anyone who takes the rule of law seriously, it is troubling to contemplate that the Treasury and the IRS are almost unconstrained in their ability to make de facto revisions to the Internal Revenue Code enacted by Congress, as long as those revisions are in a taxpayer-favorable direction. It is especially troubling to think that the relatively innocent customary deviations in the gross income context may have bred a disrespect for the rule of law on the part of the Treasury and the IRS, so that tax administrators now believe they have the power and the authority to disregard any Code section when doing so would further their notion (not Congress’s notion) of good tax policy.9

Addressing this concern directly allows us to refine our analysis of the role of rules and standards in federal income tax law. Professor Zelenak links respect for the rule of law to an obligation of the Treasury and the IRS not to “disregard [the] Code,” i.e., to follow the dictates of the statute. This, in turn, assumes that the Code, properly interpreted, specifies the answers to questions about its correct application—answers that Treasury and the IRS are bound to follow. In other words, it assumes that the Code is properly read as a compendium of rules whose meaning is independent of the interpreter.

We begin in Part I by discussing the relationship between rules and the rule of law and explaining why we think so many tax scholars are drawn to a view of the tax law as consisting primarily of rules. In Part II we summarize and expand our previous discussion of the definition of income to determine whether the term is susceptible to construction as a rule. We show that even a brief trip through some of the litigation required to determine whether certain items are income leads to the conclusion that it is not a rule. In Part III we tease out the functions served by interpreting income as a standard and examine the question of where interpretive authority lies with respect to the Code. In Part IV we turn to several examples discussed by Professor Zelenak to distinguish what we regard as interpretation (both “correct” and “incorrect”) from

9. Zelenak, supra note 1, at 851. Professor Zelenak limits his definition of customary deviations to taxpayer favorable interpretations and worries about their potential corrosive effect on rule of law values because a protaxpayer interpretation is effectively immune from challenge, given that taxpayers directly affected would have no interest in challenging it and others would lack standing to do so. Id. at 847-852. We agree that antitaxpayer positions are much more likely to be challenged, and indeed nearly all tax litigation consists of such challenges, but we do not think that antitaxpayer positions are fundamentally different from protaxpayer positions for that reason alone. Antitaxpayer positions will be challenged when the amounts are large enough and the taxpayer wealthy enough or with sufficient access to free or low cost representation to challenge them, but too often the Service’s assertion of an antitaxpayer position produces a compromise or capitulation by the taxpayer because of the cost of mounting a challenge. See generally infra notes 90-Error! Bookmark not defined., 131 and accompanying text.
what he, and we, view as either a “disregard” or an “underenforcement” of the law; we think that the contrast clarifies the contours of interpretation.

I. RULES AND THE RULE OF LAW

Exploring a connection between the rule of law and the use of rules has occupied many scholars. One notable example is Antonin Scalia. Nearly a quarter century ago, in the context of judicial decision-making, Justice Scalia linked the rule of law to the use of rules,10 and the lucidity of his exposition and his explicit discussion of the role of values make his analysis a particularly good one to use as a point of departure. Justice Scalia identified a set of values—rule of law values—promoted by rules. One of these values he described as “the appearance of equal protection,”11 arguing that “equality of treatment is difficult to demonstrate”12 when ad hoc evaluations of the situation following from a “discretion-conferring approach”13 are the basis for judgment. When two similar cases have opposite outcomes, our “sense of justice,”14 Justice Scalia argued, is not satisfied by the mere fact that the two cases are, in fact, different, but by their being “seen to be so.”15 And application of “a clear, previously enunciated rule that one can point to in explanation of the decision,”16 is more likely to address our desire for justice than is a decision supported only by the totality of the circumstances.

A second rule-of-law value identified by Justice Scalia is certainty. “[U]ncertainty has been regarded as incompatible with the Rule of Law. Rudimentary justice requires that those subject to the law must have the means of knowing what it prescribes.”17 The rule of law allows us to avoid punishment by conforming our conduct to the law’s dictates. We would add, more generally, that the rule of law speaks to our desire to assert some control over our lives by being able to anticipate the legal consequences of our conduct—for example, by making enforceable wills and enforceable agreements. Certainty, Justice Scalia argued, is undermined by the “totality of the circumstances” approach characteristic of standards.18 Rules offer a better route to certainty and its cousins, uniformity and predictability. Indeed, these values are so important to him that he believes that “[t]here are times when even a bad rule is better than no rule at all.”19

Finally, again in the context of judicial decision-making, Justice Scalia saw the use of rules as providing an “effective check upon arbitrary judges . . . . Only by announcing rules do we hedge ourselves in.”20 Indeed, this “check” on the power of government officials is perhaps the most powerful of the rule-of-law values. And while Justice Scalia was concerned with the

power of judges, limiting the power of the Executive is arguably even more important, given its direct control of severe, even deadly, coercive power.

We believe that at the core of these three rule-of-law values—the appearance of equal protection, certainty about what the law requires, and constraining the power of officials—is predictability, and rules seem to promise the desired predictability insofar as they involve, as conventionally understood, *ex ante* resolutions of the various competing considerations that the all-things-considered approach associated with standards performs *ex post*. To use a favorite rules-standards chestnut, a rule prohibiting speeds on the highway in excess of fifty-five miles per hour seems to tell us *in advance* most of what we need to know about what the law requires. By contrast, a standard requiring prudent driving seems less predictable as it appears to leave much of the judgment to the *post hoc* assessment of some decision-maker.

It is hardly surprising, then, that there seems to be a strong motivation to read the Internal Revenue Code as a compendium of rules. People do not like paying taxes, by and large, so the demand that the Code be administered in a consistent and even-handed way seems important. Even compliant taxpayers do not want to overpay and no taxpayer wants penalty exposure, so certainty about what the tax law requires seems important. And finally, there is a long libertarian tradition in this country of distrust of government and resentment of the taxing authority, in particular (after all, the Revolution was motivated in large part by resistance to tax policies), so constraining the power of IRS officials seems important. One way of capturing the confluence of these important goals is to invoke what is perhaps the most salient characteristic of our income tax system: the need of taxpayers to account, on an annual or more frequent basis, to the government, on specific forms, containing specific lines, requiring specific computations, involving precise numbers. Reading the Code as a compendium of rules offers the hope of just the kind of predictability that will serve this need.

This desire to read the Code as rules supports, in turn, the appeal of a “plain meaning” approach to statutory interpretation. As Justice Scalia has noted:

> Of course, the extent to which one can elaborate general rules from a statutory or constitutional command depends considerably upon how clear and

---

22. As Professor Weisbach has observed, “The tax law is the paradigmatic system of rules.” See David A. Weisbach, *Rules Versus Standards: An Economic Analysis*, supra note 21, at 560.

23. See David A. Weisbach, *Ten Truths about Tax Shelters*, supra note 21, at 247-251. Professor Weisbach argues that rules provide certainty because they specify “the law in advance of taxpayers acting.” *Id.* at 247. He provides an excellent discussion of the relationship between certainty, complexity, and compliance, and the use of rules or standards, which is consistent with the well-documented connection between compliance, type of income, and third-party reporting. *See also* Andrew Johns and John Slemrod, *The Distribution of Income Tax Noncompliance*, 63 NAT’L TAX J.397, 403 (2010).

24 While a discussion of this subject is beyond the scope of this paper, we want to acknowledge the competing view offered by historian Robin Einhorn, who has made the compelling and provocative claim that American distrust of government and taxation is rooted not in the value of liberty but in the legacy of slavery. ROBIN L. EINHORN, *AMERICAN TAXATION, AMERICAN SLAVERY* (2006).
categorical one understands the command to be, which in turn depends considerably upon one's method of textual exegesis. For example, it is perhaps easier for me than it is for some judges to develop general rules, because I am more inclined to adhere closely to the plain meaning of a text.25

In short, the affinity between the plain meaning approach and rules lies in the fact that both reflect what Justice Scalia identified as a core rule-of-law value: predictability.

Our point is not that Professor Zelenak and Justice Scalia share a jurisprudence. But they do share a devotion to the rule of law, and both are attracted to interpreting statutory texts as rules to promote rule-of-law values. Moreover, just as Justice Scalia finds that the plain meaning approach advances that project, Professor Zelenak asserts that the IRS has a duty to apply the Code “as written” and that customary deviations, such as the failure to count employee-retained frequent flyer miles as income, are violations of that duty.26

But if we apply section 61(a) “as written,” does it really tell us that frequent-flier miles are a type of gross income? Our claim is that to answer that question we first need to determine whether income is to be defined as a rule, or as a standard.

II. INCOME AS RULE OR STANDARD?

Section 61(a) is famously circular. It defines gross income as “all income from whatever source derived,” but does not further define the term “income.” That task fell to the Supreme Court, which defined income in Glenshaw Glass as “undeniable accessions to wealth, clearly realized, and over which the taxpayers have complete dominion.”27 Following Glenshaw Glass, section 61 should therefore be read to provide that gross income is “all undeniable accessions to wealth, clearly realized, and over which the taxpayers have complete dominion from whatever source derived.” Given the breadth of this language it is not surprising that both scholars and courts often talk about the “all inclusive language of § 61(a).”28 Yet, the only language in section 61 itself that might be described this way is “all” and “from any source derived.” Anything else has to come from what the Court has defined as income, and an analysis of what the Court has defined as income confirms that it has not sought to establish a rule. Rather, in defining income, the Court in Glenshaw Glass and the other courts that followed it have made it clear that the definition of income is subject to precisely the type of evolutionary development typical of standards, rather than the rigid application of a rule.

This dynamic evolution of the definition of income is revealed by considering some of the litigation over what constitutes income. This litigation includes Supreme Court decisions—

25. Scalia, supra note 10, at 1183-84.
28. MARVIN A. CHIRELSTEIN & LAWRENCE ZELENAK, FEDERAL INCOME TAXATION 26 (12th ed. 2012); see also Zelenak, supra note 1, at 834 (“the sweeping language of I.R.C. § 61”); Glenshaw Glass, 348 U.S. at 432 (“The definition of gross income has been simplified, but no effect upon its present broad scope was intended.”).
“mere conversion of a capital asset” does not produce income), 
*Eisner v. Macomber* (pro-rata stock dividend is not gross income to shareholder), *Edwards v. Cuba Railroad Company* (subsidies paid by the Cuban government to a U.S. corporation were not gross income), *Old Colony Trust Co. v. Commissioner* (payment of an employee’s taxes by the employer is gross income to the employee), *United States v. Lewis* (receipt of amounts in error produces gross income in the year of receipt even if the amounts are returned in a subsequent year), *United States v. Kirby Lumber Co.* (a corporation’s repurchase of its bonds at less than the issue price generates gross income to the corporation), *Commissioner v. Wilcox* (embezzled amounts are not gross income), *James v. United States* (embezzled amounts are gross income, overruling *Wilcox*), *Commissioner v. Glenshaw Glass* (receipt of punitive damages constitutes gross income), *Commissioner v. LoBue* (exercise of nonstatutory stock

30. 252 U.S. 189 (1920). The Supreme Court ruled against the IRS in affirming the judgment for the taxpayer.

31. 268 U.S. 268 (1925). In the initial case, the District Court ruled in favor of the taxpayer. Cuba R. Co. v. Edwards, 298 F. 664 (S.D.N.Y. 1921). The Supreme Court agreed and affirmed the earlier decision.

32. 279 U.S. 716 (1929). This case began when the Commissioner notified the taxpayer of deficiencies in his income tax resulting from a failure to report the income received by payment of his taxes by his employer. The issue was heard by the Board of Tax Appeals, which agreed with the Commissioner. Old Colony Trust, Co. v. C.I.R., 7 B.T.A. 648 (1927). The Court of Appeals reviewed and affirmed the Board’s decision. Old Colony Trust, Co. v. C.I.R., 33 F.2d 891 (1st Cir. 1929). The Supreme Court ultimately affirmed.

33. 340 U.S. 590 (1951). The taxpayer sought a refund from the United States for his alleged overpayment of income taxes. The Court of Claims agreed with the taxpayer in *Lewis v. United States*, 91 F. Supp. 1017 ( Ct. Cl. 1950), but the United States Supreme Court reversed.

34. 284 U.S. 1 (1931). This is another potent example of the courts’ varying interpretations of income. The Court of Claims ruled in favor of the taxpayer, finding no income. Kirby Lumber, Co. v. United States, 44 F.2d 885 (Ct. Cl. 1930). The Supreme Court, however, reversed and found income.

35. 327 U.S. 404 (1946). The long-running debate over whether embezzled funds are income started in the Tax Court, which ruled in favor of the government (income). On appeal, the decision of the Tax Court was reversed (no income). Wilcox v. C.I.R., 148 F.2d 933 (9th Cir. 1945). Finally, the government lost again when the Supreme Court affirmed the Court of Appeals decision that the embezzled funds were not income.

36. 366 U.S. 213 (1961). The government won in the District Court and Court of Appeals. United States v. James, 273 F.2d 5 (7th Cir. 959). It won again when the Supreme Court overruled its previous decision in *Wilcox v. United States* and affirmed the lower courts’ decisions, holding that embezzled funds are income to the embezzler.

37. 348 U.S. 426 (1955). Here, the Tax Court agreed with the taxpayers that punitive damages were not income. Glenshaw Glass, Co. v. C.I.R., 18 T.C. 860 (1952). The taxpayers also won in the Court of Appeals. C.I.R. v. Glenshaw Glass, Co., 211 F.2d 928 (3d Cir. 1954). However, the IRS won in the Supreme Court, which reversed. See also *William Goldman Theatres, Inc. v. C.I.R.*, 19 T.C. 637 (1953).

38. 351 U.S. 243 (1956). This case concretely illustrates the difficulty of defining income. The IRS changed its position on whether the bargain element in an employee stock option was income several times. It litigated and lost the issue in the Tax Court, *LoBue v. Commissioner*, 22 T.C. 37 (1954), then acquiesced in that decision, 1954 C.B. 2, but then withdrew the acquiescence, 1955-2 C.B. 10, n.9. It appealed and lost again in *Commissioner v. LoBue*, 223 F.2d 367 (3d Cir. 1955) but ultimately won in the Supreme Court.
option generates income)—and lower federal court decisions: *United States v. Gotcher*\(^39\) (payment of expenses for a prospective investor’s wife to accompany him on a business trip arranged by the entity in which the investment would occur is gross income to the prospective investor, but payment of his own expenses is not), *Commissioner v. Benaglia* \(^40\) (meals and lodging received by an employee and his wife for the convenience of the employer are not gross income), *Clark v. Commissioner*\(^41\) (amount received from taxpayer’s lawyer to compensate for federal income tax paid as a result of bad tax advice is not gross income), *Morris v. Commissioner*\(^42\) (farm produce grown and eaten by the farmer is not gross income), and *Dicenso v. Commissioner*\(^43\) (in-store groceries consumed by store owner are gross income).\(^44\)

The long saga over the treatment of interest-free loans provides yet another view of the evolution of the definition of income and the interaction of the IRS, the courts, and the legislature in that evolution. The IRS’s position evolved from an assertion in a published ruling in 1955 that the “mere making available of money does not result in realized income to the payee,”\(^45\) to litigating precisely the opposite position six years later in *Dean v. Commissioner*\(^46\) and numerous other cases. It culminated over two decades later with the Government’s victory in *Dickman v. Commissioner*\(^47\) and the enactment of section 7872, which treats foregone interest as income, or a gift, depending on the circumstances.

\(^39\) 401 F.2d 118 (5th Cir. 1968). The District Court agreed with the taxpayers that there was no income at all. Gotcher v. United States, 259 F. Supp. 340 (E.D. Tex. 1966). The Fifth Circuit agreed with respect to the cost of the prospective investor’s trip, but not with respect to the cost of his wife’s trip.

\(^40\) 36 B.T.A. 838 (1937), petition for review dismissed, 97 F.2d 996 (9th Cir. 1938). The Board of Tax Appeals disagreed with the Commissioner and announced what became known as the convenience of the employer doctrine, later codified in section 119.

\(^41\) 40 B.T.A. 333 (1939), nonacq. 1939-2 C.B. 45, acq. 1957-1 C.B. 4. The IRS lost this case. Here, the government and the taxpayer disagreed about whether payment from taxpayer’s tax practitioner for his error in computing the taxpayer’s return should be considered a payment of taxes, as it would if governed by *Old Colony Trust*, or compensation for loss of capital. The Court favored the taxpayer and ruled that there was no income to the taxpayer. This proved to be another example of the IRS changing its position on the matter, as it did not acquiesce to this decision in 1939, but nearly 20 years later, in 1957.

\(^42\) 9 B.T.A. 1273 (1928), acq. VII-2 C.B. 75. In this case, the Court ruled against the government in favoring the taxpayer’s position that the crops produced on his farm for his personal benefit are not income to the farmer. The government abandoned its previous position on the matter and acquiesced to the ruling.

\(^43\) 11 B.T.A. 620 (1928).

\(^44\) This list is not intended to be a comprehensive enumeration of all the cases that address the question of what is income. Rather, the list is offered to illustrate the point, elaborated *infra*, that the definition of income cannot be obvious if it requires so much litigation to discern, and if it produces in the same case different conclusions by different courts and even by the IRS itself, which changed its position with respect to the includability of amounts like the bargain element in stock options (*LoBue*) and compensation for excessive federal income taxes paid as a result of bad tax advice (*Clark*).

\(^46\) 35 T.C. 1083 (1961).

The items that caused the litigation in these cases are not instances of bizarre types of accessions to wealth—marginal cases that might be disputed in the application of any legal category. Rather, the fact that they are subject to litigation, the variety of judicial opinions with respect to the same item, and the IRS’s own changes of position both before and after litigation, show that the definition of income is not patent. If employee-retained frequent flyer miles are, as Professor Zelenak argues, a straightforward example of income, then one might well think that embezzled funds are, too; however, Wilcox involved a disagreement among the various federal courts that heard the case, and James resulted in the Supreme Court’s overruling its own fifteen-year-old precedent (Wilcox). The very controversy over the inclusion of fringe benefits, which Professor Zelenak so comprehensively describes, reveals the uncertainty: first the IRS did not seek to include the benefits in employees’ income, then it announced that it would include them, but Congress disagreed, and eventually a legislative enactment provided a compromise and some certainty.

The project we began in Defining Income was initially motivated by the need to understand why the IRS and the courts in so many instances have failed to tax various accessions to wealth, notwithstanding the absence of statutory provisions excluding those accessions from the definition of income. This problem arises because the introductory language of section 61(a)—“Except as otherwise provided in this subtitle, gross income means all income from whatever source derived”—is generally taken to mean that exclusions from the definition of income require statutory authorization. Consequently, interpreting the definition of income as a rule requires justification for the creation of many exceptions, such as those identified above, for which no statutory authority exists.

48. For example, in Lewis, the U.S. Court of Claims ruled in favor of the taxpayer, only for the decision to be reversed by the Supreme Court. 340 U.S. 590 (1951). In Kirby Lumber, the taxpayer won in the Court of Claims, but lost in the Supreme Court. 284 U.S. 1 (1931). The Tax Court in Wilcox agreed with the government, while the subsequent Circuit Court and Supreme Court decisions were pro-taxpayer. 327 U.S. 404 (1946). The taxpayers in Glenshaw Glass won in the Tax Court and the Court of Appeals only to lose in the Supreme Court. 348 U.S. 426 (1955). In LoBue, the taxpayers won in the Tax Court and the Circuit Court, but lost in the Supreme Court. 351 U.S. 243 (1956), and the IRS changed its position along the way. Finally, though less dramatically, in Gotcher the District Court found in favor of the taxpayers, while the Circuit Court found no income in the case of one taxpayer but income in the case of the other, both affirming and reversing the lower court decision. 401 F.2d 118 (5th Cir. 1968).

50. The Tax Court held that embezzled money was income, but the 9th Circuit and the Supreme Court disagreed and found no income. Comm’r v. Wilcox, 327 U.S. 404 (1946). In James, a few years later, the District Court agreed with the government that embezzled funds were income, and the Circuit Court and the Supreme Court also agreed, although this required the remarkable step of having the Supreme Court overrule its just fifteen-year-old decision in Wilcox. 366 U.S. 213 (1961). In Glenshaw Glass the IRS lost in the Tax Court and Court of Appeals but eventually prevailed in the Supreme Court. 401 F.2d 118 (1968).

51. Zelenak, supra note 1, at 842-44.

52. See I.R.C. § 132.

53. I.R.C. § 61(a) (emphasis added).
For example, although the IRS initially ruled that the retention of unsolicited books by a book reviewer was income, it later changed its position, ruling that receipt alone would not result in income. After describing this, Professor Marvin Chirelstein asked: “Can the Commissioner simply disregard the all-inclusive language of § 61 (a) when it suits him, and exclude what would otherwise be includable? Answer: yes.” Implicit in Professor Chirelstein’s assertion that the Commissioner was disregarding the language of section 61 is the assumption that the language of section 61 and hence of the Glenshaw Glass definition, must be read as a rule. We agree that if “all accessions” inflexibly means “all” accessions, unsolicited samples would come within the definition of income, and the IRS’s failure to tax them would amount to an exclusion unsupported by any statutory authorization. But we believe that the language has not, need not, and should not be so construed.

Or consider the distinction drawn in Benaglia between wages paid by a hotel to its on-site manager (gross income) and meals and lodging furnished to that same manager (not gross income). Although both were provided in connection with employment and both benefitted the employee, as the court acknowledged (the meals and lodging “may relieve [the employee] of an expense which he would otherwise bear”), only the former was deemed “compensation.” And although both were provided by the employer in order to further its business interests, only the latter was characterized as having been furnished “solely for the convenience of his employer.” Thus, applying the concept of income as a rule pursuant to which all accessions are income does not support the court’s distinction.

Treating section 61 as setting forth a rule does not explain either the court’s reasoning and decision in Benaglia or the IRS’s ruling with respect to unsolicited samples, but treating the definition of income as a standard pursuant to which many factors are relevant, does. The conclusions of the court in Benaglia and the IRS in the unsolicited samples ruling reflect consideration of a variety of factors. For example, as Professor Chirelstein has suggested with respect to Benaglia:

Perhaps, however, the “convenience-of-the-employer” rule is really a short-hand way of acknowledging the factor of restricted preference . . . . In Benaglia . . . , there is an element of personal compulsion which raises doubt about the value of the benefit to the recipient. Thus the hotel-manager must live on the hotel premises if he is to do his job (or at least the court in Benaglia so found).

57. We are not the only ones who have questioned this. Professors Chirelstein and Zelenak have made a similar observation: “The emphasis in Benaglia and in § 119 on the employer’s convenience has been questioned by many writers.” CHIRELSTEIN & ZELENAK, supra, note 28, at 20. They go on to provide a persuasive critique of the emphasis on the convenience of the employer.
59. Id. at 838.
60. CHIRELSTEIN, supra note 56, at 21. See also CHIRELSTEIN & ZELENAK, supra note 28, at 21.
And, with respect to the unsolicited samples ruling:

On reflection, the Commissioner must have decided that the administrative effort—identifying the textbook recipients (thousands of school-teachers), persuading them that the books were indeed “income,” placing a value on the books, and then checking individual tax returns to be sure the correct amounts were reported—was not worth the auditing expense that such an effort would entail.61

We agree that both the distinction made in Benaglia and the conclusion in the unsolicited samples ruling reflect a variety of important concerns, but our point is that precisely because of that neither can be said to flow from the text of section 61(a) “as written.”62 And it is because such concerns cannot be ignored that it is so difficult to define income.

Indeed, income is so hard to define that in addition to the cases that purport to set forth a definition (e.g., Glenshaw Glass, Macomber) and decide the treatment of specific items (e.g., meals and lodging and illegal gains), courts have felt the need to develop a variety of doctrines to further limn the contours of the term. Examples abound: claim of right,63 assignment of income,64 constructive receipt,65 constructive dividends,66 and so forth. Treating the definition of

61. CHIRELSTEIN, supra note 56, at 25. See also CHIRELSTEIN & ZELENAK, supra note 28, at 26-27.
62. The tenuous nature of the distinction can also be seen in the Supreme Court's decision in Commissioner v. LoBue, in which the Court explicitly rejected the Tax Court's reasoning that the bargain element in an employee stock option was not income because the option was granted by the employer to give the employee a proprietary interest in the business. 351 U. S. 243, 247 (1956).
63. If a taxpayer receives earnings under a claim of right and without restriction as to its disposition, he has received income which he is required to return, even though it may still be claimed that he is not entitled to retain the money, and even though he may still be adjudged liable to restore its equivalent. N. Am. Oil Consol. v. Burnet, 286 U.S. 417, 424 (1932). See also United States v. Lewis, 340 U.S. 590 (1951) (taxpayer cannot retroactively adjust tax payment in a previous year if repayment occurred in a subsequent year).
64. The assignment of income doctrine, treating amounts as income to the earner or owner of property that generated the income was born in 1930 when the Supreme Court refused to allow a valid contract to dictate the tax consequences of earnings, explaining, “There is no doubt that the statute could tax salaries to those who earned them and provide that the tax could not be escaped by anticipatory arrangements and contracts however skilfully [sic] devised to prevent the salary when paid from vesting even for a second in the man who earned it.” Lucas v. Earl, 281 U.S. 111, 114-15 (1930). See also Helvering v. Horst, 311 U.S. 112 (1940) (finding that when a father maintains control of bonds that he has purchased for his son and merely transfers the coupon to his son, the father must pay the tax on the income from coupons); Comm’r. v. Banks, 543 U.S. 426 (2005) (finding that when a litigant’s recovery constitutes income to the litigant even with respect to the portion of the recovery due to the attorney on a contingency basis); United States v. Basye, 410 U.S. 441 (1973) (payments into a retirement trust for a partnership are includible in gross income and taxable to the beneficiary partners).
65. The doctrine of constructive receipt treats an amount as income when it is either actually or “constructively” received:
Income although not actually reduced to a taxpayer's possession is constructively received by him in the taxable year during which it is credited to his account, set apart for him, or otherwise made available so that he may draw upon it at any time, or so that he could have drawn upon it during the taxable year if notice of intention to withdraw had been given. However, income is not constructively received if the taxpayer's control of its receipt is subject to substantial limitations or restrictions.
Treas. Reg. § 1.451-2(a). As the Tax Court has explained, “The basis of constructive receipt is essentially unfettered control by the recipient over the date of actual receipt.” Hornung v. Comm'r, 47 T.C. 428, 434 (1967). See also Carter v. Comm'r, 40 T.C.M. 654 (1980) (a cash basis taxpayer has taxable income for the year in which his wages
income as a standard whose contours are shaped by a variety of considerations provides a theoretically satisfactory explanation for the decisions of the courts and the IRS, as well as for the development of the doctrines that have come to be crucial in determining the existence of income.

III. STANDARDS AND INTERPRETIVE AUTHORITY

A. The Function of a Standard

Reflecting on the administrative and judicial difficulties encountered in defining income reveals why the meaning of income must be allowed to evolve through the process of considering successive disputes over what is and is not to be included within that category. First, as in the case of all statutes, Congress could not have possibly anticipated all the new phenomena that might become candidates for inclusion as income when it enacted the Internal Revenue Code. New and creative forms of wealth not conceived of at the time of the Code’s promulgation (employee-retained frequent-flier miles, for instance), demand assessment as the future unfolds.

Second, tax touches virtually all facets of life. Hence, the number of values relevant to determining answers to doctrinal questions in tax law is great. The large number of relevant values, in turn, has critical implications. Those charged with interpreting and applying the tax law (administrators and judges) must be able to respond to current, as well as temporary changes in conditions. Thus, for example, empirical research suggests that judges are more likely to

---

were actually received because although they were due to him, he could not have obtained them as a result of a bureaucratic mistake); Fetzer Refrigerator Co. v. United States, 437 F.2d 577 (6th Cir. 1971) (a controlling shareholder constructively received rents due to him by the corporation because he had the authority to draw checks for the company).

66. A constructive dividend is an item that was not in form a dividend declared by a corporation but which is treated as a dividend for tax purposes: “It is well established that any expenditure made by a corporation for the personal benefit of its stockholders or the making available of corporate-owned facilities to stockholders for their personal benefit may result in the receipt by the stockholders of constructive dividends.” Ashby v. Comm’t, 50 T.C. 409, 417 (1968). See also Dean v. Comm’t, 57 T.C. 32 (1971) (finding that a corporation’s purported loan was actually a constructive dividend); Stan Frisbie, Inc. v. Comm’t, 60 T.C.M. 440 (1990) (finding that the rent-free use of a corporate sailboat was a constructive dividend); Hood v. Comm’t, 115 T.C. 172 (2000) (finding that a corporation’s payment of legal fees for its sole shareholder’s criminal tax evasion litigation constituted a constructive dividend).

67. Eric Solomon, The Process for Making Tax Policy in the United States: A System Full of Friction, 67 THE TAX LAWYER (forthcoming 2013) (“The Internal Revenue Code is the foundation of the U.S. federal tax system. However, it does not answer all the tax questions that arise in a complex society and economy. . . . Because there are so many unanswered questions in the Internal Revenue Code, the Treasury Department has issued thousands of pages of regulations.”)

68. See It’s Not a Rule, supra note 4, at 128.

69. As Eric Solomon has observed, various other government participants, such as Congressional staff members and employees of the Treasury Department Office of Tax Policy, usually have extensive private sector business, legal or academic experience. After their government experience, they generally return to the private sector and often interact with current government officials. Some even return to the government at a later time. This interchange between the public and private sectors is beneficial because it
embrace pro-government interpretations of the Code during times of national emergency in order to serve the contemporaneously ascendant value of revenue raising. Moreover, the effectiveness of tax law depends on a perception of its legitimacy by both the public and Congress, which requires that those charged with interpreting and applying tax law be especially committed to getting it right. Hence, we have described instances of the IRS reassessing and sometimes changing its view about interpretations of the tax law (e.g., whether interest-free loans generate income), and we have seen the same thing in the courts (e.g., whether embezzled amounts are gross income).

Because of both the inevitability of unanticipated forms of wealth and the need for the Code’s interpreters to be exquisitely sensitive to social needs, changing conditions, and social and political values, it is especially crucial that the meaning of income be open to evolution. And that need suggests an explanation for the particular textual structure of section 61(a) and its

enables government policymakers to understand current trends and issues. On the other hand, it contributes to the perception of a “revolving door,” whereby former government officials have special access to current government officials and personally profit from this access.

Solomon, supra note 67 (emphasis added).

70. See generally Nancy Staudt, The Judicial Power of the Purse: How Courts Fund National Defense in Times of Crisis (2011). Professor Staudt observes that the Court has gone so far as to suggest that it has a role to play in raising the revenue necessary to meet the nation's wartime needs. In a dispute involving World War II taxes, the justices noted, the country was “faced with revenue needs and a tax program of a magnitude unthought of in modern times, and we all realize it is necessary to raise every dollar of additional revenue that can be raised without seriously disturbing or shattering our national economy.”

Id. at 2 (quoting Putnam v. Comm'r, 352 U.S. 82, 91 n.16 (1956)). The quoted passage from Putnam, itself quoting the legislative history to the provision in question in the case, appears in the portion of the opinion in which the Court struggles to ascertain Congressional intent. It is significant to us, as to Professor Staudt, that the Court considers the explicitly stated revenue-raising objective in determining Congressional intent and ultimately holding for the Government.

Professor Staudt begins the book by describing and discussing two cases familiar to every tax lawyer, Commissioner v. Court Holding, 324 U.S 331 (1945), and United States v. Cumberland Public Service Co., 338 U.S 451 (1950). As she notes, [s]cholars, courts, and commentators have attempted to reconcile the two cases, but conventional wisdom holds that the Supreme Court did nothing more than foster confusion and incoherence in an important area of the law [when it held for the taxpayer in Cumberland after having held for the Government in Court Holding, just four years before]. After all, the two cases involved identical legal provisions and virtually identical facts and circumstances, yet the justices unanimously agreed to issue divergent outcomes.

Id. She goes on to posit that while Court Holding and Cumberland appear confusing and irreconcilable on their face, the cases are in fact wholly predictable if important factors are taken into account, namely the existence of wartime conditions. The justices considered Court Holding at a time when the United States was fighting major wars against enemy states on several fronts, but Cumberland emerged after World War II had dissolved into peacetime.

Id. The empirical study described in the book supports that thesis.

predecessors: Section 61 is laid out in the classic form of *ejusdem generis*, i.e., it defines gross income by setting out a list of examples, preceded by the words “including (but not limited to) the following items.” *Ejusdem generis* is normally taken by the courts as an invitation to define the term case-by-case through analogy—by comparing a candidate for inclusion within the term to the list of examples—and thereby permitting the definition of the term to evolve and expand.73

Classically, *ejusdem generis* imposes significant constraint on interpretation. After all, it requires the use of a specific list as the analytical starting point. Nevertheless, when interpreting the meaning of income, courts often ignore the constraints of *ejusdem generis*. For example, the criteria announced in *Glenshaw Glass* (“accessions to wealth clearly realized, and over which the taxpayers have complete dominion”) are not supported by reference either to the Code’s list or even to precedent.74 Indeed, the Court in *Kirby Lumber* explicitly rejected the use of precedent, stating that there was “nothing to be gained by the discussion of judicial definitions.”75

If the courts are not always anchoring their interpretation of gross income in the statutory list or in precedent, what then are they drawing upon? Case-by-case determination is, of course, familiar from the common law approach to developing the scope of doctrinal standards. The meaning of, say, the common law standard of “reasonable care” in tort law evolves through case-by-case consideration of specific sets of facts. It permits the evolution of that standard to proceed incrementally, responsive to changes in our understanding of the values that define tort law. Similarly, the use of this approach to define the scope of tax concepts such as income permits the definition of those concepts to evolve incrementally in response to the shifting social and political values that inform tax law.76

---

72. The classic illustration of employing the canon of *ejusdem generis* is *McBoyle v. United States*, in which the Court was asked to decide whether a statute which made it a crime to steal “an automobile, automobile truck, automobile wagon, motor cycle, or any other self-propelled vehicle not designed for running on rails,” also made it a crime to steal an airplane. 283 U.S. 25 (1931). Two lower courts, finding an airplane to fit within the statute given that it is a “self-propelled vehicle not designed for running on rails,” had upheld the thief’s conviction. See *McBoyle v. United States*, 43 F.2d 273. Nevertheless, a unanimous Supreme Court reversed. Applying the canon of *ejusdem generis*, Justice Holmes considered what the enumerated items had in common and compared those characteristics to those of an airplane. Concluding that none of the enumerated items “can be supposed to leave the earth,” he concluded that an airplane was not the type of “self-propelled vehicle not designed for running on rails” covered by the statute. 283 U.S. at 27. The thief’s conviction was therefore reversed.

73. *E.g.*, *Old Colony Trust Co. v. Comm’r*, 279 U.S. 716 (1929) (“The payment of the tax by the employers was in consideration of the services rendered by the employee, and was again derived by the employee from his labor” and citing § 213 of the Revenue Act of 1916); *Morris v. Comm’r*, 9 B.T.A. 1273 (1928) (“Products of a farm consumed by the operator thereof and his family do not appear to come within any of the categories of income enumerated in the taxing statutes and the administrative regulations of the Commissioner.”)

74. *E.g.*, *Comm’r v. Glenshaw Glass Co.*, 348 U.S. 426 (1955) (analyzing whether punitive damage award constitutes income), *Comm’r v. Benaglia*, 36 B.T.A. 838 (1937) (distinguishing an employee’s “compensation” (income) from an employee’s benefits provided “solely for the convenience of his employer” (not income)).

76. We see the fruits of this evolution in, for example, the amendment of the Code following *Kirby Lumber* to add the category held in that case to constitute income—“discharge of indebtedness”—to the section’s list of illustrative categories constituting the definition of gross income and in the Treasury regulation that supplements the list, including the addition of some of the items recognized as income in the cases mentioned above: “punitive
We developed this idea that standards are especially sensitive to values in *Defining Income*, where we offered an account of the rules-standards distinction. A field of law is constituted by a unique collection of values. What these values are emerges and evolves from the ongoing experience with answering important questions that arise within the field. While a specific set of values will uniquely constitute a particular field, some of the values might be shared with other fields. Moreover, some values play a significant role in all fields of law—that is, they are transcendent law values. They are things important to law generally and include justice, administrability, and the rule of law. The value of justice expresses a desire to achieve the overall “best” answer to a legal question within a field; the value of administrability captures the importance of the efficient and effective functioning of each field; and as we have discussed above, the value of the rule of law reflects a yearning for predictability.

To be successful, provisions of law within the field must promote some set of values from among the universe of those that define the field. The more values a provision promotes—the more questions that must be answered to apply the provision and thus the more facts that become relevant to answering those questions—the more the provision will operate as a standard. Conversely, a provision that promotes only a few of the constitutive values or that gives strong priority to one value will make relatively few facts relevant and will operate more as a rule.

The transcendent law values mentioned above—justice, administrability, and the rule of law—play a particularly significant role in determining whether a provision functions as a rule or a standard. Justice, with its emphasis on getting the optimal answer, presses toward considering more of the relevant values and more of the consequently relevant facts; that is, justice pushes us toward interpreting a provision as a standard. On the other hand, the rule of law, with its emphasis on predictability, pushes us toward interpreting a provision as a rule. (Predictability, as
Justice Scalia argued, gives us the appearance of equal treatment, certainty about what the law requires, and constraints on the power of officials. Administrability shares concerns with both the rule of law and justice. On the one hand, administrability emphasizes clarity and simplicity in the service of predictability; on the other hand, injustice can generate resistance, which in turn will undermine the efficiency and effectiveness that are the hallmarks of administrability.

In the case of tax law we have argued that a large set of values constitutes the field. Some of these are economic values: revenue raising and efficiency are especially important here. Some are values having to do with the vertical and horizontal equity of the tax system. Some are values having to do with public policy. This latter group of values is important not only because our income tax law addresses public policy by design, but because taxation has a potentially significant impact on just about every facet of our lives. Thus, for example, we have argued that

82. See Scalia, supra note 10 and accompanying text.
83. An even closer look reveals that administrability is multifaceted and that these different facets implicate a variety of different values. For example, Professor Douglas Kahn has pointed out the “huge administrative difficulties” that would attend attempts to tax an “exchange of services performed in a marital community.” Douglas A. Kahn, Exclusion from Income of Compensation for Services and Pooling of Labor Occurring in a Noncommercial Setting, 11 FLA. TAX REV. 683, 687 (2011). Some of these—what Professor Kahn identifies as “valuation issues” and the difficulty of “discover[ing] the events where one spouse performed a service for the other”—have to do with simplicity, predictability, and ease of application. Id. Others implicate the “highly personal nature” of the services performed such that attempts to tax those services would threaten “an invasion of privacy and an intrusion into an individual’s private noncommercial life, and that would be unacceptable in a free society.” Id. at 687-88. Such an untoward intrusion into taxpayers’ private lives would be problematical on its own. It would also likely generate resistance and thereby undermine the operation of the tax system.

Similarly, consider the example of attempting to tax the fair market value of a caught baseball. Here, administrability would be undermined by resistance caused by disrespect for the important role of baseball in American culture, see Charles O. Rossotti, Many Unhappy Returns 95 (2005) (observation by White House spokesman, Mike McCurry, that taxing Mark McGwire’s seventieth homerun baseball was “about the dumbest thing I’ve ever heard in my life”), and by the impracticality of taxing each of the hundreds of thousands of baseballs retrieved by fans each season, many of which (unlike McGwire’s record-breaking homerun ball) have a vanishingly low fair market value, but at least some of which may nevertheless have an ascertainable fair market value. And this is only the tip of the administrability iceberg. Although we believe teasing out the constituent parts of administrability is important to our project given the prominence of that concept in our interpretive analysis, its precise contours are not directly related to the thesis of this article. We will therefore refer generally to administrability in the text of this article without specifying the particular way in which administrability is implicated.

84. Here we are referring to tax expenditures, such as the home mortgage interest deduction. We recognize that despite the persistence of the popular belief that the home mortgage interest deduction was intended to and does promote home ownership, there is substantial legal and economic scholarship that questions this popular belief and suggests that the deduction increases the price of homes, rather than making home ownership more affordable. See, e.g., Rebecca M. Morrow, Billions of Tax Dollars Spent Inflating the Housing Bubble: How and Why the Mortgage Interest Deduction Failed, 17 FORDHAM J. CORP. & FIN. L. 751, 771 (2012) (suggesting that the price of the deduction is not only the loss in tax revenue without an evident increase in the rate of home ownership, but also the effective subsidy provided to the real estate industry through price capitalization, which is “the increase of price in an asset due to the increase of value of an asset caused by a subsidy or incentive”); Dennis J. Ventry, Jr., The Accidental Deduction: A History and Critique of the Tax Subsidy for Mortgage Interest, 73 LAW AND CONTEMP. PROBS. 233, 278-79 (2010) (charging the deduction with distorting “the cost of owner-occupied housing relative to other investments, resulting in economy-wide misallocation of capital stock, artificially elevated housing prices, overconsumption of large, expensive homes, and precarious high LTV ratios”).
the American love of baseball is a relevant value in deciding whether to regard baseballs caught by fans at games as gross income.85

Among the transcendent law values, the rule of law and administrability are especially powerful in the operation of the income tax system. The complex bureaucracy; the need to file returns that can be completed by taxpayers and administered by the IRS; the requirement of information reporting by a large number of parties, including both payors and recipients of payments; our libertarian traditions; and our historical resistance to taxation—all make it hardly surprising that taxpayers, tax professionals, and tax scholars are attracted to interpreting the Internal Revenue Code as a compendium of crystalline rules. Indeed, in many instances (e.g., section 63(c), the standard deduction provision) it is difficult to even imagine reading the provision as anything other than as a rule.

But justice always presses in the other direction, urging interpreters of the Code to take more values and more facts into account so that a provision’s application in particular cases gives us the right answer. That is, justice always offers us the option of interpreting a provision of the Code as a standard.

B. Who Decides?

The core of our claim is that nothing intrinsic to the Code demands that we read its provisions as rules (or as standards). As argued above, competing considerations present us with the choice, and the choice is part of interpreting the Code. Hence, a crucial question is: Who has interpretive authority? Who decides?

Inevitably Treasury and the IRS must initially interpret the Code. Treasury has long had the authority to issue regulations interpreting the Code,86 which were entitled to deference even before the Supreme Court held that Treasury’s tax regulations are entitled to Chevron deference.87 Moreover, the Court has explicitly recognized “the primary authority of the IRS and its predecessors in construing the Internal Revenue Code,”88 explaining that Congress, the source of IRS authority, can modify IRS rulings it considers improper; and courts exercise review over IRS actions. In the first instance, however, the responsibility for construing the Code falls to the IRS. Since Congress cannot be expected to anticipate every conceivable problem that can arise or to carry out day-to-day oversight, it relies on the administrators and on the

85. See Defining Income, supra note 4, at 339-344.
86. See I.R.C. § 7805.
courts to implement the legislative will. Administrators, like judges, are under oath to do so.  

As the Court observed, Congress can always determine the issue by legislation—whether the IRS’s initial position is protaxpayer or not. If Congress does not act, then a protaxpayer agency determination remains because, as Professor Zelenak points out, no one has standing to challenge it. Because interpretive authority is shared among Treasury, the IRS, the courts, and Congress, no branch necessarily has the final say. Rather, interpretation of the Code can more resemble a conversation among the branches. Consider the story of Evelyn Gregory.

At the outset, Mrs. Gregory owned all of the stock of Monitor Securities Corporation. Monitor owned stock in United Mortgage Corporation. A buyer wanted to buy the stock in United Mortgage but the sale would have generated a large gain to Monitor, subject to the corporate income tax. So Monitor did not sell. Instead, Monitor transferred the shares in United Mortgage to a newly formed corporation, Averill, and Averill issued all of its shares to Mrs. Gregory. Averill then liquidated, distributing its only asset, the United Mortgage stock, to Mrs. Gregory. That transaction did not attract a tax at the corporate level, but it was taxable to Mrs. Gregory and resulted in the United Mortgage stock having a basis (in Mrs. Gregory’s hands) equal to its fair market value. Mrs. Gregory then sold the United Mortgage stock to the buyer (at its fair market value), resulting in no additional gain or tax. At the end of the transaction, two important things had occurred: (1) Mrs. Gregory had the cash received from the buyer, and (2) there had only been one level of tax imposed on the gain, at capital gains rates to Mrs. Gregory. Had Monitor made the sale directly, there would have been a tax at the corporate level to Monitor, and when Monitor distributed the cash to Mrs. Gregory, she would have had to pay a tax on that dividend at ordinary income rates.

Mrs. Gregory took the position that Monitor and Averill engaged in a reorganization. The statute provided that a reorganization was “a transfer by a corporation of . . . a part of its assets to another corporation” if immediately thereafter “the transferor or its stockholders or both are in control of the corporation to which the assets are transferred.” The IRS disagreed with Mrs. Gregory’s position. It argued that “the creation of the Averill corporation was without substance and must therefore be disregarded” and that, therefore, Averill was not a corporation so that Monitor’s transfer of United Mortgage stock was not “a transfer by a corporation . . . to another corporation.” The Board of Tax Appeals rejected that argument. Mrs. Gregory wins.

On appeal, the Second Circuit agreed with the Board that Averill was a corporation and that the transaction meets the “dictionary definitions of each term used in the statutory definition

89. Id. at 596-97.
90. This is illustrated by the recent section 382 saga recounted by Professor Zelenak, in which Congress did not agree with a protaxpayer position and reacted accordingly, overruling the agency’s position by legislation. See Zelenak, supra note 1, at 845-48; infra notes 106-110.
[of a reorganization]."93 Nevertheless, Mrs. Gregory lost. Despite the literal compliance with the words of the statute, Judge Learned Hand explained that

it does not follow that Congress meant to cover such a transaction, not even though the facts answer the dictionary definitions of each term used in the statutory definition. It is quite true, as the Board has very well said, that as the articulation of a statute increases, the room for interpretation must contract; but the meaning of a sentence may be more than that of the separate words, as a melody is more than the notes, and no degree of particularity can ever obviate recourse to the setting in which all appear, and which all collectively create.94

The court held that there was no reorganization:

All these steps were real, and their only defect was that they were not what the statute means by a ‘reorganization,’ because the transactions were no part of the conduct of the business of either or both companies; so viewed they were a sham, though all the proceedings had their usual effect.95

The Supreme Court affirmed the Second Circuit’s judgment, holding that literal compliance with the Code is not necessarily sufficient. The purported reorganization was a “mere device.”96

In these circumstances, the facts speak for themselves and are susceptible of but one interpretation. The whole undertaking, though conducted according to the terms of subdivision (B), was in fact an elaborate and devious form of conveyance masquerading as a corporate reorganization, and nothing else.97

The Gregory litigation revealed that Congress had not said enough. So Congress said more. Eventually the very language of the Supreme Court denying tax-free status to a “mere device” became a part of the statute,98 and the administrative agency further interpreted it by issuing regulations that provide that whether a transaction like Mrs. Gregory’s is a “device” depends on

all the facts and circumstances, including, but not limited to, the presence of the device factors specified in paragraph (d)(2) of this section . . . , and the presence of the nondevice factors, specified in paragraph (d)(3) of this section . . . . However if a transaction is specified in paragraph (d)(5) of this section, then it is ordinarily considered not to have been used principally as a device.99

94. Id. at 810-11.
95. Id. at 811.
97. Id. at 470.
The *Gregory* litigation and its aftermath illustrate the interaction among the three branches of government in the interpretation of the Code. The administrators are the first-order interpreters, either through litigation or the issuance of guidance, but their interpretation is neither the first nor last word on the subject.

For our purposes, the more fundamental point of the *Gregory* saga is this: It has never seemed remarkable to characterize what the IRS and the courts did in *Gregory* as interpretation, even though the statutory provision contained an explicit definition of “reorganization.” Likewise, it has not seemed remarkable that the IRS interpreted the word “income” to include punitive damages or meals and lodging provided by an employer or many other things. Indeed, if the term “reorganization,” which has an explicit definition in the statute, can be interpreted not to encompass transactions that satisfy all the “steps” set out in the statute, then the term “income,” which contains no such highly articulated definition, must perforce be susceptible of interpretation. Our claim is that the IRS’s decision not to treat employee-retained frequent flyer miles or caught baseballs as income is as much as an interpretation as its decision to treat punitive damages or meals and lodging as income or what Mrs. Gregory did as not a reorganization. The only difference is that the former decisions are protaxpayer, whereas the latter is antitaxpayer.

As Professor Zelenak points out, a protaxpayer interpretation will usually be invulnerable to challenge. But whether the taxpayer or the government benefits from the interpretation does

---

100. See supra text accompanying note 94.

101. Although we take this subject up directly elsewhere, we believe that the rule/standard analysis explains IRS interpretations outside of the definition of income, including interpretations in corporate taxation. For example, it seems to us that the rule/standard analysis explains why the IRS has taken the position that family hostility should not be taken into account in applying the attribution provisions of section 318, (“the facts and circumstances of a particular case cannot contradict the mechanical determination under section 318 of how much stock a shareholder owns.”) Rev. Rul. 80-26, 1980-1 C.B. 66. The IRS position treats section 318 as a rule and doing so respects the dominance of the value of administrability that the provision was designed to promote. Not surprisingly, the courts have been sharply divided. Compare David Metzger Trust v. Comm’r, 693 F.2d 459 (5th Cir. 1982)(family hostility does not prevent the application of the attribution rules), Michael N. Cerone, 87 T.C. 1 (1986) (family hostility irrelevant), Robin Haft Trust v. Comm’r, 61 T.C. 398 (1973)(family hostility irrelevant), with Robin Haft Trust, 510 F.2d 43 (1st Cir. 1975)(family hostility taken into account), rev’g 61 T.C. 398 (1973), Rodgers P. Johnson Trust, 71 T.C. 941 (1979)(hostility taken into account), Estate of Squier, 35 T.C. 950 (1961)(hostility taken into account), acq. 1961-2 C.B. 5, acq. withdrawn and nonacq. substituted 1978-2 C.B. 4). Similarly, the protaxpayer result in Granite Trust Co. v. United States, 238 F.2d 670 (1st Cir. 1956) is easily understood as following from the judicial interpretation of section 332 as a rule (and the rejection of the IRS’s attempted interpretation as a standard). Gitlitz v. Comm’r, 531 U.S. 206 (2001) also presented an interpretive dispute, with both sides arguing that the ‘plain meaning’ of section 108(d)(7)(A) supported their desired result but the IRS (and Justice Breyer, in dissent) actually advocating a reading that had the virtue of “closing a loophole” and in effect advocating a more standard-like construction. *Gitlitz* also provides an example of the dynamic nature of interpretation, as Congress subsequently weighed in, amending section 108(d)(7)(A) to legislatively reverse *Gitlitz*. Job Creation and Worker Assistance Act of 2002, Pub. L. 107-147 (2002). The so-called *INDOPCO* regulations can easily be seen as revealing Treasury’s decision to interpret the term capitalization as setting forth a standard within which safe harbor and de minimis rules provide some certainty; the iconic term “earnings and profits” used in section 316 to define a dividend has no statutory definition and judicial opinions have interpreted as a standard, which appropriately allows the term to develop as corporate finance and accounting evolve. See Bangor & Aroostook R.R. v. Comm’r, 193 F.2d 827 (1st Cir. 1951), cert. denied, 343 U.S. 934 (1952).
not affect its character as an interpretation.\textsuperscript{102} For example, the IRS is engaging in interpretation when it decides that employee-retained frequent-flier miles are not income (a protaxpayer result), just as it is engaging in interpretation when it decides that punitive damages are income (an antitaxpayer result). Whether an interpretation is pro- or antitaxpayer is independent of the act of interpretation. And even when the IRS reaches a protaxpayer conclusion, Congress can weigh in, as it did following the various section 382 Notices, which Professor Zelenak describes, and to which we now turn.

IV. THE VARIETIES OF INTERPRETATION

A. Interpretation, Disregard, and the Story of the Section 382 Guidance

An interpretation of the Code is an understanding of the provision that can be justified by tax values. Whether it is correct or incorrect is determined by its fate. A correct interpretation is one that has achieved widespread (albeit provisional, or contingent), acceptance. Conversely, an interpretation is incorrect if it is foreclosed by some combination of congressional direction, relevant judicial decisions, history, and tradition.

The holdings of\textit{ Gregory} identify both correct and incorrect interpretations. The correct interpretation is the familiar one described above: literal compliance with the terms of the Code does not suffice to make a transaction a reorganization. The incorrect interpretation was that proffered by the IRS. The IRS interpreted the term "corporation" as a standard pursuant to which an entity incorporated under state law would not be a corporation for tax purposes if it was incorporated to avoid income tax. The government sought to treat such an entity as a sham, but that argument was soundly rejected by the Board of Tax Appeals and later by Judge Learned Hand, writing for the Second Circuit, as well as by the Supreme Court.\textsuperscript{103} It has also been consistently rejected by many other courts.\textsuperscript{104}

\textsuperscript{102} We agree that this is often the case, but of course, exceptions exist. For example, many assumed that the Check-the-Box regulations would be invulnerable to challenge when they became effective in January 1997 because their position was so protaxpayer. This assumption proved false when taxpayers argued in subsequent litigation that in issuing the regulations, the Treasury exceeded its authority to issue interpretive regulations. In\textit{ Littriello v. United States}, Mr. Littriello was the sole member of an LLC that had not made an election under the Check-the-Box regulations to be treated as a corporation. 484 F.3d 372, 374 (6th Cir. 2007). Under the Check-the-Box regulations, this made Mr. Littriello’s LLC a disregarded entity and subject to pass-through taxation. As a result, the IRS argued that when the LLC failed to pay the required withholding and FICA taxes, Mr. Littriello was personally liable for those deficiencies. \textit{Id}. Mr. Littriello argued that the regulations were invalid and therefore the taxes could not be imposed upon him, but the IRS won. \textit{Id}. Since\textit{ Littriello}, the regulations’ validity has repeatedly been upheld in analogous cases. \textit{See, e.g.},\textit{ McNamee v. Dep’t of the Treasury}, 488 F.3d 100 (2d Cir. 2007); Med. Practice Solutions, LLC v. Comm’r, 132 T.C. 125 (2009), \textit{aff’d sub nom.} Britton, et al. v. Comm’r, 2010 U.S. App. LEXIS 19925 (1st Cir. 2010); Stearn & Co., LLC v. United States, 499 F. Supp. 2d 899 (E.D. Mich. 2007).

\textsuperscript{103} The Supreme Court confirmed that “[n]o doubt, a new and valid corporation was created.”\textit{ Gregory v. Helvering}, 293 U.S. 465, 469-470 (1935).

\textsuperscript{104} \textit{See, e.g.},\textit{ Aiken Indus., Inc. v. Comm’r}, 56 T.C. 925, 933 (1971) ("[W]hile we agree with the petitioner that Industrias was a "corporation" for purposes of article IX, and that it therefore cannot be disregarded, we do not agree with the petitioner's conclusion that this factor alone was sufficient to qualify the interest in question for the exemption from taxation granted by article IX. Rather, we must determine whether the transaction
Both the correct and the incorrect interpretations are “interpretations” because both can be justified in terms of tax values. The correct interpretation is grounded in the value of having tax follow economics so that particular tax consequences obtain only when a transaction is economically significant; that is, it has economic effects outside of tax. The incorrect interpretation is also grounded in the value of substance because the IRS sought to disregard corporations that were formed exclusively for the purpose of tax avoidance. What makes one interpretation correct and the other incorrect is how they have been received. A correct interpretation achieves widespread acceptance and consequent stability. An incorrect interpretation is widely rejected. The consistent refusal of the courts to interpret “corporation” as a standard demonstrates that such an interpretation lacks the required widespread agreement and, for this reason, can be said to be incorrect.

But sometimes an application of the Code cannot plausibly be justified in terms of any tax values at all. Such an application is not an interpretation at all, but rather reflects a disregard of the Code. The story of the section 382 guidance provides a fine illustration of such disregard.

As Professor Zelenak succinctly explains:

Section 382 of the Code imposes strict limits on the deductibility of corporate net-operating-loss carryforwards and of unrealized built-in losses, following either an acquisition of a loss corporation by another corporation or a major change in the ownership of a loss corporation. In September 2008, as Congress was considering a massive bailout bill for the financial industry, the IRS of the Bush administration made its own contribution to the bailout effort by issuing Notice 2008-83, declaring—without making any attempt to explain or justify its conclusion—that the § 382 limitations on the use of built-in losses following an ownership change would no longer apply to banks. The primary purpose of the notice appears to have been the facilitation of the acquisition of failing Wachovia—by Wells Fargo, as it turned out. Although the notice generated considerable outrage in the media, among tax experts, and on Capitol Hill, it achieved the desired result. Early in 2009, Congress took the highly unusual step of enacting legislation specifically disapproving of Notice 2008-83 as "inconsistent with the congressional intent" and describing the legal authority for the notice as "doubtful." The legislation, however, also declared that taxpayers could rely on the notice with respect to ownership changes occurring before January 17, 2009.

105. This concept is now codified in § 7701(o) to include both the existence of an economic (non-tax) effect and a business purpose.
The Obama administration followed the Bush-era precedent, thus making protaxpayer administrative revisions of § 382 a bipartisan activity. The Obama-era IRS issued several § 382 notices of its own, including, most prominently, Notice 2010-2, which declared - again, without apparent support from the statute - that § 382 would not be triggered if the Treasury Department were to sell its shares of General Motors to the public. Although the notice attracted some sharp criticism, it remains in effect.106

Professor Zelenak, like many tax experts and Congress, believes that in issuing Notice 2008-83, the IRS disregarded section 382.107 We agree, but for a different reason. Whereas Professor Zelenak believes that Notice 2008-83 disregards the Code “as written,” we believe that the Notice disregards the Code (and is not an interpretation), because it is not grounded in relevant tax values.

The history of section 382 makes it clear that the provision was designed

(1) to provide for tax neutrality on the disposition of corporations that possess favorable tax carryover characteristics (i.e., to eliminate both incentives and disincentives for the acquisition); (2) to limit the use of corporate tax benefits generated under one set of owners to the income attributable to the particular pool of capital that generated those benefits; and (3) to provide objective rules that could be applied and administered with greater certainty. With the exception of a modification to the pool of capital approach, these objectives were clearly evident in the final version of § 382.108

These are the relevant tax values, and they point in the direction of interpreting the provision as a rule. Furthermore, prior revisions had demonstrated the Congressional desire to move from judicial doctrines and statutory provisions whose application was dependent on specific facts and circumstances to an administrable, if very complicated, rule.109 Indeed, when it adopted the current version of section 382 in 1986, the Congress made plain its intent to supplant a standard with determinable rules.110

106. Zelenak, supra note 1, at 845-46 (footnotes omitted). Congress limited the effect of Notice 2008-83 in the American Recovery and Reinvestment Tax Act of 2009, Pub. L. No. 111-5, § 1261(a) (explicitly finding that the IRS lacked authority to exempt “particular industries or classes of taxpayers” from section 382 and that the exemption in Notice 2008-83 was “inconsistent with the congressional intent” with regard to section 382).

110. The Conference Report specifically states that the conferees intended “that the Libson Shops doctrine will have no application to transactions subject to the provisions of the conference agreement.” H.R. REP. NO. 99-841 (1986) (Conf. Rep.), reprinted in 1986 U.S.C.C.A.N. 4075, 4282. Libson Shops denied the use of net operating losses following a merger under the provisions applicable before enactment of the 1954 Code. 353 U.S. 382. It was the uncertainty created by the standards-based facts and circumstances analysis represented by Libson Shops and
The original version of section 382 had not satisfactorily accomplished this last goal. Section 382 as originally enacted in 1954 was a direct response to the difficulty of policing trafficking in loss corporations with only section 269, which permits the disallowance of tax benefits for transactions made for the “principal purpose . . . [of] evasion or avoidance of Federal income tax,” and has been consistently interpreted as a standard. By the time of the 2008 Notice, section 382 provided detailed criteria which denied the deduction of a net operating loss if certain changes in the ownership of the corporation occurred between the time that the loss was incurred and the time the deduction was to be taken, as permitted by the net operating loss carryover provisions.

Moreover, by allowing Wells Fargo to deduct losses incurred by Wachovia, Notice 2008-83 made Wells Fargo’s acquisition of Wachovia more attractive because the ability to deduct Wachovia’s losses in effect reduced the cost of the acquisition. The Notice thereby encouraged the very trafficking in loss corporations that section 382 was intended to discourage and prevent. Hence, the position in the Notice—exempting banks from inclusion in the term similar cases that provided the impetus for the enactment of the first section 382 in 1954. BITTKER & EUSTICE, supra note Error! Bookmark not defined., at ¶ 14.45. Commentators understood this and cheered, with Bittker and Eustice almost gleefully declaring that in the 1986 revision of section 382, “the Libson Shops doctrine was finally interred.” Id. at ¶ 14.42[2]. Moreover, in affirming the continuing application of section 269 to the net operating loss carryover provisions, Congress allowed the IRS to use the standards-based approach of that provision to protect the fisc when appropriate while fostering administrability in most cases through the enactment of clear, if complicated, rules.

111. I.R.C. § 269(a). As Bittker and Eustice explain:

On the ground that § 269 had proved to be ineffectual as a weapon against the traffic in loss corporations because it had required proof that tax avoidance was the primary purpose of the transaction, in 1954 Congress enacted two new restrictions on the net operating loss carryover. The first was § 382(a), applicable to changes of ownership through the purchase of stock, which provided for the complete disallowance of the carryover if, roughly speaking, 50 percent of the corporation’s stock changed hands by purchase in a two-year period and the corporation’s old trade or business was discontinued. The business-continuity requirement of § 382(a) presented many factual difficulties and resulted in extensive litigation, with often conflicting opinions that were difficult to reconcile. The second restriction was § 382(b), applicable only to changes of ownership to a tax-free reorganization, under which the carryover was reduced proportionately if the old owners received less than 20 percent of the stock of the reorganized corporation (and was totally eliminated if they received no stock). Neither restriction was dependent upon a showing of tax-avoidance purpose; the function of both restrictions was to reduce or eliminate the carryover in appropriate cases even though the transactions could not be brought within the scope of § 269.

Desiring to combine the bifurcated approach of § 382 into a single regime and to clear up various uncertainties, including especially the business-continuity test, Congress amended § 382 in 1976.

BITTKER & EUSTICE, supra note 108, at ¶ 14.42. The 1976 amendments had a delayed effective date and were eventually supplanted by the 1986 amendments, without ever having come into effect. Id.

112. Prior to the 2008 Notice the most recent amendments had been enacted in 1986. The 1986 amendments were the only ones to take effect after section 382 was originally enacted. Id. at ¶ 14.42[1]. Section 382 was first amended in 1976 to clarify the business continuity test and other uncertainties, but delays to the effective date of these changes ultimately prevented their implementation before the 1986 rewrite. Id.

113. This is the neutrality objective that was at the top of the list provided by Professors Bittker and Eustice and which case law and commentary clearly show to be the dominant motive behind restrictions on the deductibility of net operating losses following a change in control. See BITTKER & EUSTICE, supra note 108.
corporation”—not only is unsupported by relevant tax values but indeed contradicts them. Notice 2008-83 was not an interpretation of section 382 but a disregard.114

In sum, while we agree with Professor Zelenak that Notice 2008-83 disregards the Code, we do so for different reasons, and it is those differences that also cause us to disagree that the misadventure of Notice 2008-83 was possibly caused by the “precedent of the § 61 customary deviations,” which we regard as interpretations. Professor Zelenak contends that:

The recent § 382 notices should be troubling to anyone who values the application of the rule of law to tax administration. One can only speculate, but it is plausible that the § 382 notices never would have been issued but for the precedent of the § 61 customary deviations. Although the § 61 deviations are considerably easier to defend on the merits than the § 382 notices, both the Bush and Obama administrations may have taken the § 61 deviations to stand for the proposition that the Treasury Department and the IRS are always free to disregard the dictates of the Internal Revenue Code, as long as they do so in a taxpayer-favorable direction.115

Our analysis suggests otherwise with respect to Notice 2008-83.116 We agree that disregarding the Code is inconsistent with the rule of law. However, interpreting the Code is not, and in Defining Income we showed that income is most aptly interpreted as a standard. Hence, the IRS’s interpretations of section 61 do not reflect a “disregard [of] the dictates of the Internal Revenue Code.”117 They promote relevant tax values, such as administrability, and reflect a long tradition of interpreting the section as a standard. By contrast, as we noted above, we believe that the IRS was not interpreting, but was disregarding section 382 when it issued Notice 2008-83.

---

114. It is tempting to distinguish interpretation from disregard on the basis of subjective motivation and to say that an incorrect interpretation of a Code provision is predicated on a good faith (albeit unsuccessful) attempt to determine the meaning of the provision, whereas a disregard of the Code is a deliberate refusal to apply the provision at all. Our analysis, which is grounded in the relevance of tax values, makes speculation about motivation and attributions of good or bad faith unnecessary.

To be clear, we do not actually believe that bad faith motivated the 2008 and other Notices or that the government officials who were responsible for their promulgation engaged in deliberate lawlessness. Rather, we believe that the IRS disregarded the requirements of section 382 in the interest of serving what the Administration believed was a more urgent national goal.

115. Zelenak, supra note 1, at 847.

116. Whether the 2010 Notice represents a disregard of the law as was the case with the 2008 Notice or an interpretation of section 382 and the Emergency Economic Stabilization Act of 2008, P.L. 110-343, is harder to determine. The reasons for this include the effect of another statute in addition to the Code, the sui generis identity of the seller (the Government), and the posture of the Notice as an announcement of the forthcoming issuance of regulations, on the one hand, and the existence of provisions dealing with stock acquired in bankruptcy reorganizations (section 382(l)(5)), on the other. We will not engage in that analysis in this article, but we believe that, as in the case of the 2008 Notice, it is crucial to distinguish disregard from interpretation and that our analysis provides a useful mechanism for doing that. Nevertheless, if it turns out that after considering the factors just described, and perhaps others, the IRS is considered to have disregarded the law, then we would reach the same conclusion regarding its relationship to the IRS’s interpretations of section 61. That is, we would not see a causal connection between the section 61 interpretations and any section 382 disregard, not because different provisions are involved but because the two actions—interpretation and disregard—are fundamentally different.

117. Zelenak, supra note 1, at 833-834.
because its position was not only unsupported by relevant tax values but contradicted them. In short, employing tax values to interpret the Code is a necessary component of tax administration; ignoring tax values and disregarding the law is not. There is no reason to think that the exercise of the IRS’s legitimate authority to interpret would cause it to disregard the law.

B. Structural Interpretations, Dubious Interpretations, and Underenforcement

We conclude our analysis by considering three categories of items that the IRS does not treat as income but that Professor Zelenak distinguishes from customary deviations.

The first category is what he refers to as “a protaxpayer interpretation of the Code that may seem dubious or even insupportable in terms of the literal language of the Code, but which would almost certainly be adopted by the courts if the IRS were to reverse its position and taxpayers were to challenge the new IRS position.” Professor Zelenak’s prime example is the “exclusion from gross income of imputed income from services (that is, the value of services one performs for oneself) and from property (that is, the rental value of owner-occupied housing and consumer durables).” His justification is that “[t]he exclusion of such benefits dates from the dawn of the income tax and is so central to the structure of the income tax that it is inconceivable that the courts would support an administrative effort to reverse that exclusion.”

Professor Zelenak is not alone in concluding that imputed income is not income—almost all commentators would agree, and we do as well—but as our analysis shows, we take issue with the assumption that imputed income should be thought of as an exclusion rather than as something that is not income within the meaning of section 61 at all. Construing section 61 as a rule that arguably brings within it all accessions, including imputed income and even leisure and psychic benefits leads to that conclusion, but our project has been to question why that is the only or even the best construction of section 61. Construing section 61 as setting forth a standard to be determined after consideration of the relevant values produces a better, more transparent result than assuming the definition of income is an all-inclusive rule: if it is a rule, the only way

118. Id.
119. Id. at 834.
120. Id.
121. In a widely cited piece, Professor Donald B. Marsh suggests that imputed income is not income so as to “balance the exemption of leisure income and thus to restore in a measure the balance between work and leisure as alternative ways of using one’s time.” Donald B. Marsh, The Taxation of Imputed Income, 58 Pol. Sci. Q. 514, 520 (1943). He notes that because it would be nearly impossible and impractical for the government to attempt to tax our leisure activities, the government must, in the name of equity, exempt imputed income from taxation. Id. Professor Dodge also agrees that imputed income does not constitute income because in his view, imputed income does not represent an accession to wealth. Joseph M. Dodge, Accessions to Wealth, Realization of Gross Income, and Dominion and Control: Applying the “Claim of Right Doctrine” to Found Objects, Including Record-Setting Baseballs” 5 Fla. Tax Rev. 685, 688 (2000). For a graphic and recent illustration of the administrative difficulties of taxing imputed income, including managing public outrage and incomprehension, see Bruce Bartlett, Taxing Homeowners as if They Were Landlords, N.Y. Times Economix Blog (Sept. 3, 2013, 12:01 AM), http://economixblogs.nytimes.com/2013/09/03/taxing-homeowners-as-if-they-were-landlords/ (note especially the blogged reactions to Bartlett’s discussion of the concept). See also Bruce Bartlett, Taxing Medicare Benefits, N.Y. Times Economix Blog (Sept. 17, 2013, 12:01 AM), http://economixblogs.nytimes.com/2013/09/17/taxing-medicare-benefits/.
that imputed income is not income is to exclude it, but no statutory authority for such an exclusion exists. Construing section 61 as a standard, which permits consideration of important tax values like administrability, provides an explanation for the nontaxation of imputed income and thereby avoids the need to distinguish it from employee-retained frequent flyer miles. Under our construction, both items are not income as a matter of interpretation by the agency charged with interpreting the provisions of the Code. They are the same in that neither is income as that term is interpreted when it is viewed as a standard.

The second category is what Professor Zelenak characterizes as “simple underenforcement of the law without any indication (beyond the mere underenforcement) that the IRS acquiesces in widespread noncompliance with the Code.” His example is the 8 percent requirement for information reporting of tip income. While we claim that the items in Professor Zelenak’s first category result from interpreting the definition of income as a standard, we agree that underenforcement is completely different. We also agree that fully or partially failing to require the payment of tax on a category of items that the IRS knows are income because it lacks adequate resources is different from treating the items as not income at all.

Still, it bears pointing out that the reasons for underenforcement must relate to the values that define the field of tax law. As a recent controversy demonstrated, focusing tax enforcement efforts on a particular political group assumed to be disfavored by the current Administration is unacceptable. And the straightforward reason is that such discrimination finds no support in the values that animate federal tax law. By contrast, the practice that Professor Zelenak points to—that “the IRS is content to enforce the income tax on . . . tips subject to information reporting [requiring an allocation of 8 percent of gross receipts to certain tipped employees], without making a serious effort with respect to the other half (roughly speaking) of actual tip income”—serves the tax value of administrability. While other tax values (e.g., horizontal equity)

122. We assume that Professor Zelenak would put government transfer payments, which the IRS has announced are not income under the general welfare doctrine (see n. 50 of Defining Income, supra note 4, and Notice 99-3, 1999-1 C.B. 271), such as Medicare and Medicaid, into this category as well, and not classify them as customary deviations.

123. Zelenak, supra note 1, at 834.

125. See Treasury Inspector General for Tax Administration, Inappropriate Criteria Were Used to Identify Tax-Exempt Applications for Review, 2013-10-053 (May 14, 2013). In mid-2013, an internal audit revealed that in considering applications for tax-exempt status, conservative groups were singled out for additional scrutiny by the IRS specifically because of their political leanings, sometimes taking years to issue a decision. The result was widespread public condemnation of the IRS and calls for firings, further investigations, and legal action. While this summary of the “scandal” is merely just that, a summary, and not to be construed as our beliefs on the matter, we do want to note in agreement that such a scandal could certainly weaken the public’s trust in the impartiality expected from the IRS.

127. This observation does not depend on assumptions about people wanting to cheat. It is simply unrealistic to expect that either employers or employees will be able to reliably and consistently maintain the detailed records of ad hoc tips required to accurately calculate and report this income. Adjusting IRS practice to such realities is a critical part of serving the tax value of administrability.
might be sacrificed, the tradeoff between accuracy and administrability can be plausibly accounted for within the universe of income tax values. In this respect the IRS is not acting in a way that differs materially from that of other administrative agencies that routinely exercise “prosecutorial discretion” and do so in ways that carry out the values that define the area of law that the agency administers.

The third category is described by Professor Zelenak as “mere dubious protaxpayer interpretations of the Code by the Treasury Department or the IRS.”128 His example here is proposed regulations issued in 1992, which would have extended the exclusion of I.R.C. § 101(a) for life-insurance proceeds ‘paid by reason of the death of the insured’ to ‘qualified accelerated death benefits’ that are paid by an insurer to a terminally ill insured within twelve months of the expected death of the insured.129

Professor Zelenak distinguishes items in this category from customary deviations in that these items purport to be the result of interpretations (however erroneous they might be), while in the case of customary deviations, the IRS is “simply conceding that it has no intention to enforce the law.”130

Professor Zelenak’s discussion of section 101 suggests that interpretation depends on ambiguity. For him, “by reason of the death of the insured” is sufficiently ambiguous to leave room for interpretation, and while the interpretation reflected in the proposed regulations might be “dubious,” he believes that it is nonetheless interpretation because the ambiguity of section 101(a) of the Code permits it. By contrast, Professor Zelenak takes section 61(a) to be unambiguous and thus capable of being directly applied “as written.” For all the reasons we discussed earlier, including the voluminous litigation required to define income, we disagree. If we are correct that the term “income” demands continual consideration and interpretation, then customary deviations are interpretations.131

More fundamentally, the ambiguity of a Code provision is not the beginning of the analysis; rather it is part of the conclusion reached when interpreting text. And because texts can be interpreted differently, analysts can disagree about whether the text is ambiguous. For example, it seems to us that Professor Zelenak believes that the term “income” is unambiguous and, therefore, not subject to interpretation; we disagree. By contrast, Professor Zelenak appears willing to accept that section 101(a) is ambiguous and, therefore, subject to interpretation, as former IRS Commissioner Fred Goldberg and also former ABA Tax Section Chair James

128. Zelenak, supra note 1, at 835.
129. Id.
130. Id.
131. Perhaps the following thought experiment will help to illuminate this point. Imagine a regulation that took the position that employee-retained frequent flyer miles were not income. Given the voluminous and sometimes contradictory history of litigation regarding the scope of section 61(a), it is unlikely that the Supreme Court would find the regulation invalid on the ground that the meaning of the term is unambiguous. (And despite the difficulty of challenging a generally protaxpayer position it could be the case that a given taxpayer wanted income so as to qualify for a greater tax benefit, such as the Earned Income Tax Credit, assuming the income would qualify as earned income.) By contrast, it is difficult to imagine that the Court would uphold a regulation that provided that banks were not corporations to which section 382 is applicable.
Holden believed, although Professor Zelenak is troubled by the interpretation made by Treasury.\footnote{Zelenak, supra note 1, at 835 n.25 and accompanying text (“[T]he section 101(a) exclusion for payments ‘by reason of the death of the insured’ is broad enough to permit payments made by reason of imminent death” (quoting James P. Holden, Lee Sheppard’s Grumpy Attack, 58 TAX NOTES 1130, 1131 (1993))).} In this case it is Lee Sheppard who disagrees: for her, “death” is unambiguous and not subject to interpretation.\footnote{Zelenak, supra note 1, at 835, noting that “a prominent commentator sharply criticized the proposed regulations as irreconcilable with the statutory language.” Professor Zelenak was referring to Lee Sheppard’s observation that “‘By reason of the death of the insured’ means what it says—death.” Id. at n.24 (quoting Lee A. Sheppard, The Goldberg Variations, or Giving Away the Store, 58 TAX NOTES 530, 533 (1993)). Congress subsequently amended section 101 to essentially codify Commissioner Goldberg’s interpretation. See I.R.C. § 101(g).}

We do not claim that Professor Zelenak is being inconsistent in finding ambiguity in one term and not in the other. Rather, we believe he is reaching different interpretive conclusions about different provisions. And that is the point: Ambiguity is not an intrinsic quality of a statutory text.\footnote{That is not to say that interpretations cannot be criticized as better or worse, just as Lee Sheppard criticizes Treasury’s interpretation of “by reason of the death of the insured” as mistaken. See supra note 133.} Rather, ambiguity emerges from context and use. For example, in the recent \textit{Mayo} case, the Supreme Court confronted the question whether the statutory term “student” is ambiguous.\footnote{Mayo Found. for Med. Educ. & Research v. United States, 131 S. Ct. 704 (2011).} The Court considered the particular context of medical residency and concluded that in that context the meaning of the term student was ambiguous. In many ordinary contexts, the meaning of “student” is unambiguous and uncontroversial. But the word does not define itself, and the Court could not apply the Code “as written.”

Professor Zelenak’s article implies that there is a fourth category distinct from customary deviations—namely, disregard of the law, as exemplified by the 2008 \textit{Notice} exempting banks from the ambit of section 382. This category resembles underenforcement because in both categories some part of the law is not being enforced and in both the law is not being interpreted. (The underenforcement of tip income is not an interpretation of section 61, and the 2008 \textit{Notice} is not an interpretation of section 382.) However, disregard is fundamentally different from underenforcement in that the latter remains anchored in values relevant to the field of tax, such as administrability. As we discussed, the 2008 \textit{Notice} is not anchored in tax values; it contradicts them. We believe that such instances of disregard of the law differ from what we see as interpretations anchored in tax values, and we also believe that they are rare.

\section*{CONCLUSION}

The Internal Revenue Code does not “read itself.”\footnote{See Stanley Fish, Consequences, 11 CRITICAL INQUIRY 433, 446 (1985) (“The semantic meaning of the text does not announce itself; it must be decided upon, that is, interpreted. . . . In short, no text reads itself.”). \textit{See also} H.L.A. Hart, \textit{The Concept of Law} 126 (2d ed. 1994) (rules do not “provide for their own interpretation. The plain case, where the general terms seem to need no interpretation and where the recognition of instances seems unproblematic or ‘automatic,’ are only the familiar ones, constantly recurring in similar contexts, where there is general agreement in judgments as to the applicability of the classifying terms.”); Richard K. Greenstein, \textit{Text as
“stretches beyond the breaking point the concept of what counts as an interpretation.” As he explains:

According to Professors Abreu and Greenstein, the statutory definition of gross income (as glossed by Glenshaw Glass) “gives the IRS the flexibility to navigate the shoals of social opinion regarding income taxation, thereby . . . permitting the evolution of a concept of income that serves . . . important values in taxation,” including “a variety of noneconomic values.” This stretches beyond the breaking point the concept of what counts as an interpretation. Nothing in the language or legislative history of § 61, and nothing in Glenshaw Glass, suggests (for example) that employee-retained frequent-flier miles are not within the definition of gross income.

It is, of course, possible to anchor the interpretation of section 61 in language, legislative history, and case law, and we do not deny that doing so is an appropriate interpretive technique. But nothing requires that interpretation stop with that. For instance, Learned Hand did not limit himself to consideration of statutory language, legislative history, or case law to conclude that what Mrs. Gregory did (which appeared to track the statutory language precisely), did not constitute a reorganization. He invoked purpose and context to reach this conclusion—also an appropriate interpretive technique.

Given the requirement of interpretation, we have argued that the IRS necessarily has the initial responsibility for interpreting the Code, sometimes subject to judicial oversight and always subject to correction by Congress. Part of that interpretive responsibility permits Treasury, the IRS, and the courts (in the service of tax law’s values) to treat a Code provision as a rule or a standard. For example, the IRS has interpreted the statutory terms “marriage,” “spouse,” “husband and wife,” “husband,” and “wife,” in accordance with a rule that defers to

138. Id. (citing Defining Income, supra note 4, at 300). Professor Zelenak goes on to observe: Moreover, the IRS has never stated that frequent-flier miles are not within the scope of § 61. In fact, the IRS’s most significant pronouncement on the topic—its 2002 announcement—implies the opposite when it states that “the IRS has not pursued a tax enforcement program” with respect to frequent-flier miles and notes that “[a]ny future guidance on the taxability of these benefits will be applied prospectively.” Thus, far from claiming that its position is an interpretation of the statute, the IRS acknowledges that it is not enforcing the law.

139. Helvering v. Gregory, 69 F.2d 809, 811 (2d Cir. 1934).
the place of celebration for determination. On the other hand, in the *Gregory* litigation the Second Circuit and the Supreme Court interpreted “reorganization” as a standard.

We believe that the IRS treats the definition of gross income as a standard, guided by a variety of the values—both economic and non-economic—that animate the field of federal income tax law in order to facilitate the definition’s evolution. This approach has allowed the IRS to address new questions that have arisen, involving caught baseballs, employee-retained frequent flyer miles, and the like. These interpretive decisions may be correct, dubious, or incorrect. In any case, they are not “deviations,” but legitimate exercises of a shared lawmaking authority that is part and parcel of the rule of law.

---

141. See discussion supra section III.B. The courts disagreed with respect to the term “corporation,” but both the Court of Appeals and the Supreme Court agreed with respect to “reorganization.”
